

Clinical conditions identified by Urinalysis

High specific gravity (>1.035)	Nephrotic syndrome, dehydration, acute glomerulonephritis, heart failure, liver failure, shock
Low specific gravity (<1.035)	Diabetes insipidus, nephrogenic diabetes insipidus, acute tubular necrosis, pyelonephritis
Protein, microalbumin, creatinine	Renal disease, fever congestive heart failure (CHF), hypertension, tumors
Glucose in protein	Sugar levels are obviously important in diagnosing diabetes
Ketone bodies in urine	Ketonuria occurs in diabetes mellitus and starvation
Bilirubin	Liver damage or disease
Blood	Present of haemoglobin or myoglobin. Kidney damage, infection, kidney or bladder stones,
Red blood cells	Kidney or bladder cancer or blood disorders
White blood cells	Haematuria
